

Agentic Intelligence Marketplace

StargazeMPP is the first agentic intelligence marketplace built natively on the Machine Payments Protocol -- where AI agents discover, access, and pay for on-chain intelligence in a single HTTP request cycle. No accounts. No API keys. No KYC. Agents pay per query. Providers earn per response.

MPP (Stripe + Tempo + Paradigm) | x402 compatible | Tempo L1 + Solana | Privacy-opt-in | elizaOS v2 | \$GAZE Token | Visa + Stripe + Lightning | Web4

v1.0.0 | May 2026 | Confidential & Proprietary

1. The Market Moment -- MPP Launched 7 Weeks Ago

March 18, 2026: Stripe and Tempo launched the Machine Payments Protocol -- the HTTP 402 status code finally implemented for machines. Tempo raised \$500M at a \$5B valuation from Paradigm, Thrive Capital, Greenoaks. Design partners: OpenAI, Anthropic, Visa, Mastercard, DoorDash, Shopify, Deutsche Bank, Revolut, Klarna. 100+ services at launch. Solana Foundation released the official MPP SDK. Agentic commerce in 2026: \$9.14 billion and accelerating. Zero dedicated MPP intelligence marketplaces exist. StargazeMPP fills that gap.

\$9.14B agentic commerce 2026 already live	\$500M Tempo raised at \$5B valuation	100+ MPP services at launch	7 wks since MPP mainnet gap still open	0 MPP intelligence marketplaces

2. What MPP Is -- The Protocol That Changes Everything

MPP is an open IETF-standard built on HTTP 402 Payment Required. Agent requests a resource. Server returns 402 with price and accepted methods. Agent wallet signs a payment credential. Agent retries with that credential as a header. Server verifies via ecrecover -- no RPC, no database. Delivers resource plus receipt. One request-response cycle. Zero human intervention. Session mode: agent pre-funds escrow once, streams signed vouchers per call, server batch-settles on-chain when session closes. Enables \$0.0001 per-request billing at sub-100ms latency.

Technology	Status	What it does
MPP core	LIVE March 18, 2026	Stripe + Tempo. IETF Standards Track Internet-Draft. Methods: Tempo (PathUSD), Stripe (cards),
MPP Sessions	LIVE production	Escrow deposit (~500ms setup). Cumulative EIP-712 signed vouchers per request. ecrecover serve
Tempo L1	LIVE mainnet	Paradigm + Stripe payments L1. EVM-compatible (Reth). 0.6s deterministic finality. PathUSD native
x402 (Coinbase)	LIVE -- 140M+ tx	MPP-compatible. StargazeMPP accepts both rails. Permissionless, zero protocol fees, Apache 2.0.
Solana MPP SDK	LIVE -- Solana Fdn	npm: solana-mpp. Pay with PathUSD on Tempo, query any chain. Payment rail independent of que
MPP32	LIVE production	The reference implementation. 8-dimensional Solana token intelligence at 0.008 PathUSD/query. N

3. What StargazeMPP Is -- Four Layers

StargazeMPP is the discovery, reputation, and privacy layer that the MPP ecosystem is missing. Providers register intelligence services. Agents query StargazeIndex to discover what exists and at what price. Agents open one session and query across multiple providers. Privacy-sensitive data sits behind StargazeVault ZK proofs. Providers with bad responses lose \$GAZE stake. No accounts. No KYC. No API keys. Agent wallet is complete identity.

Layer	What it does
StargazeIndex	Public intelligence directory at /stargaze.json. Every registered MPP service discoverable by any agent. Filter by category.
StargazeSession	MPP session management. Dual-rail: Tempo PathUSD + Solana USDC x402. Agent opens one session, queries multiple providers.
StargazeVault	Privacy wrapper for sensitive intelligence. ZK proofs verify output is derived from claimed inputs without exposing underlying data.
StargazeReputation	On-chain provider trust scores. Response accuracy crowd-verified. Uptime, latency, refund rate tracked automatically. Scored by agents.

4. Six Intelligence Categories -- The Full Web4 Stack

StargazeMPP connects every project in this ecosystem into one MPP-discoverable marketplace. AirborneLabs drone data. YaloBase robot telemetry. Synapse hypothesis results. AxonMed health cohorts. Aevum longevity biomarkers. TrigonPi macro signals. Kalder compliance attestations. MPP32 on-chain analytics. One session. Any intelligence. Any agent. Pay per answer.

On-Chain Analytics

MPP32 token intelligence (8-dimensional, 0.008 PathUSD). Whale flow, liquidation clusters, funding rates, smart money, on-chain sentiment, DEX volume. Dual-rail MPP + x402.

Physical AI Telemetry

AirborneLabs SkyVault aerial Data NFTs as MPP services. YaloBase DataVault ground robot telemetry as MPP services. Operators earn PathUSD per AI agent query on their flight/mission data.

DeSci Research

Synapse ATL hypothesis verification results. AxonMed CVH-attested health cohort aggregates (ZK-private). Aevum DunedinPACE biomarker data. Sports science claim verdicts.

RWA and Macro

TrigonFi 560+ signal feeds: DXY, 10Y yield, CPI, stablecoin flows, ETF inflows, RWA yields (BUIDL, USDY, syrupUSDC). Pay-per-signal -- no Bloomberg subscription.

Compliance Intel

Kalder ComplianceGate OFAC screening (0.5 USDC per screen). Kalder ZK geofence proofs (1 USDC per proof). Drone operator SAS attestations. Robot PoWE verification records.

AI Model Endpoints

Any AI model registers as MPP service. GroundIntel and AeroIntel elizaOS agents listed per-inference. Computer vision, domain LLMs, prediction models -- metered per call.

5. StargazeVault -- Privacy Is the Moat

Every competitor in the data marketplace space leaks what was queried and by whom. StargazeVault makes StargazeMPP the only intelligence marketplace where sensitive data stays private by design, payment amounts are confidential on Tempo, and ZK proofs prove answer quality without revealing the underlying data.

Mechanism	Status	What it protects
Tempo confidential transactions	LIVE	Payment amounts between agent and provider are private on-chain. Auditor key available for
ZK aggregate proofs (AxonMed)	Groth16	Health cohort queries return ZK-proven aggregate stats. Pharmaceutical AI agents query with
ZK geofence proofs (Kalder)	Light Protocol	Compliance queries return ZK proofs of OFAC/geofence status without revealing mission co
Buyer-key data NFTs (YaloBase/Airbase/555)	ERC-655	TBA Physical AI data NFT raw access encrypted per buyer. Intelligence summary public. Raw tel
Anonymous session routing	MPP native	Session vouchers are signed by agent wallet only. StargazeMPP routing layer does not log

6. \$GAZE Token

\$GAZE is the marketplace coordination token, not the payment token. PathUSD and USDC are payment. \$GAZE is stake, governance, and access. More intelligence flows through StargazeMPP = more \$GAZE burned on routing fees. More providers staked = more \$GAZE locked. Deflationary at scale.

Action	Cost	Mechanism
Provider registration stake	50 \$GAZE	Slashable on SLA breach or response fraud
Verified Provider tier	500 \$GAZE	Badge + premium StargazeIndex listing
StargazeVault access	200 \$GAZE	Required to register privacy-sensitive intelligence
Routing fee	2% of session	50% burned, 50% to \$GAZE stakers
Intelligence citation burn	5 \$GAZE	Burned when StargazeMPP result cited in IP-NFT
Reputation vote	1 \$GAZE	Burned per crowd-verification vote
Agent priority routing	10+ \$GAZE held	Low-latency provider access priority
Staking APY	50% routing fees	PathUSD/USDC to \$GAZE stakers weekly

7. Ecosystem Integration Map

Project	How it integrates
MPP32	First Verified Provider. Token intelligence oracle. StargazeMPP routes all MPP32 queries from its directory.
AirborneLabs	SkyVault aerial Data NFTs as MPP services. Drone operators earn PathUSD per AI agent query on their flight data.
YaloBase	DataVault ground robot NFTs as MPP services. Robot operators earn PathUSD per query on telemetry.
Synapse	ATL hypothesis results as MPP services at \$0.05/verified finding.
AxonMed	CVH-attested health cohort aggregates behind StargazeVault ZK proofs.
Aevum	Biological age biomarker feeds: DunedinPACE deltas per cohort query.
TrigonFi	560+ macro + on-chain signals as pay-per-signal MPP data feeds.
Kalder	OFAC screening at 0.5 USDC/screen. ZK geofence at 1 USDC/proof.

8. Roadmap

1 StargazeIndex + Session Infrastructure -- Weeks 1-8

Public directory at /stargaze.json. MPP session dual-rail (Tempo + Solana). Provider SDK: npm @stargazempp/provider-sdk. First 10 providers: MPP32, TrigonFi signals, Kalder OFAC, AxonMed HRV. \$GAZE on Tempo EVM. Reputation oracle v1.

2 StargazeVault + Physical AI Data -- Weeks 9-18

ZK privacy wrapper live. AirborneLabs SkyVault as MPP services. YaloBase DataVault as MPP services. Synapse hypothesis results. 50+ providers. 10,000 agent queries/day.

3 Audit + TGE + AI Model Marketplace -- Weeks 19-26

Trail of Bits audit. \$GAZE TGE. GroundIntel + AeroIntel agents as MPP services. 100+ providers. 100,000 agent queries/day. Aevum biomarker feeds live.

4 Enterprise + CCIP Cross-Chain -- Weeks 27-36

Chainlink CCIP: \$GAZE and provider registry across Tempo + Solana + Base. Enterprise bulk sessions. 1M+ queries/day.

5 Full Agentic Intelligence Economy -- Month 10+

1,000+ providers. \$1M+ PathUSD/month routed. StargazeMPP is the Bloomberg Terminal of the agentic economy.

9. North Star

1,000+ providers	1M+ queries/day	\$1M+ PathUSD/month	600ms query-to-answer	0 KYC required
----------------------------	---------------------------	-------------------------------	---------------------------------	--------------------------

Every drone flight, robot mission, health cohort, hypothesis result, and macro signal in this ecosystem becomes a monetizable intelligence asset accessible to any AI agent in under 600 milliseconds. No account. No API key. No KYC. Pay per answer. Earn per response. Prove everything cryptographically.
